

RAJAT GULERIA

Senior Mobile Application Engineer | Cloud Architect

Chandigarh, India · rguleria158@gmail.com · +91 6284250338 · linkedin.com/in/rajatguleria · github.com/cdeveloper123

PROFESSIONAL SUMMARY

Senior Mobile Application Engineer with 6+ years of progressive experience architecting and shipping production-grade Android, iOS, and cross-platform mobile applications. Deep expertise in Flutter, Dart, Kotlin, Java, Swift, Jetpack Compose, and React Native — with a strong track record of delivering scalable, high-performance apps across fintech, healthtech, logistics, and commerce domains. Proven architecture leadership in Clean Architecture, MVVM, and modular system design. Adept at leading distributed remote engineering teams, owning full product delivery lifecycles, driving CI/CD pipeline maturity, and optimizing mobile performance at scale. Recognized for reducing crash rates by 70%+, improving app startup times by 40%+, and consistently achieving 4.7+ App Store ratings. Brings strong product ownership mindset and a bias for execution in fast-moving, remote-first global engineering organizations.

TECHNICAL SKILLS

Mobile Platforms	Android (SDK 21–35), iOS (14+), Flutter / Dart, React Native, Jetpack Compose, SwiftUI
Languages	Kotlin, Java, Dart, Swift, JavaScript / TypeScript
Architecture	Clean Architecture, MVVM, MVI, BLoC, Provider, Redux, Modular Architecture, Dependency Injection (Hilt, Dagger, Koin, GetIt, Riverpod)
Backend & APIs	REST APIs, GraphQL (Apollo), WebSockets, Firebase (Firestore, Auth, FCM, Remote Config, Analytics), gRPC, Supabase
Data & Storage	Room, SQLite, Hive, Isar, SharedPreferences, DataStore, Offline-first Architecture, Local Persistence Systems
DevOps & CI/CD	GitHub Actions, Fastlane, Bitrise, Firebase App Distribution, Play Store & App Store Release Engineering, CodeMagic
Performance & QA	Profiling (Android Studio, Xcode Instruments, Dart DevTools), Crashlytics, Sentry, Leak Detection, Unit / Widget / Integration Testing, Mockito, Flutter Test
Security & Auth	SSL Pinning, Certificate Transparency, Biometric Auth, OAuth 2.0, JWT, Secure Keystore, Data Encryption
Mobile Features	Push Notifications (FCM / APNs), Deep Linking, Background Task Orchestration, In-App Purchases, Payment Gateways (Stripe, Razorpay), Maps & Geolocation, Native Module Bridging
Tools & Platforms	Git, Jira, Confluence, Figma, Postman, Linear, Notion, Slack, Lottie, Mixpanel, Segment, Amplitude

WORK EXPERIENCE

Senior Mobile Engineer (Remote) | **Coder Roots**

May 2023 – April 2026 · Remote

- Owned end-to-end cross-platform mobile architecture across Flutter, React Native, and iOS, delivering 7 production applications serving 500K+ active users for distributed international teams. Using BLoC stack management.
- Architected a modular Flutter monorepo + mobile CI/CD ecosystem using GitHub Actions and Fastlane, reducing build times by 38% and shrinking release cycles from 5 days to under 6 hours.
- Designed offline-first synchronization systems using GraphQL subscriptions, Hive persistence, and conflict resolution layers, enabling zero-data-loss user experiences across unreliable network conditions.
- Engineered AI-powered mobile automation features using TensorFlow Lite, Claude APIs, and intelligent recommendation pipelines, improving user retention by 28% across consumer-facing products.
- Reduced product-wide crash rates from 2.1% to 0.3% through Crashlytics-driven diagnostics, memory optimization, isolate-based computation offloading, and production observability integrations.
- Mentored engineers through architecture reviews, ADR documentation, code quality governance, and reusable design-system implementation, improving PR quality by 60% while accelerating scalable feature delivery.

- ▶ Developed and scaled 5 enterprise Android applications using Kotlin and Java, reaching 200K+ downloads with a combined 4.6 Play Store rating across B2B and consumer-facing products.
- ▶ Led migration of legacy Android systems to MVVM + Clean Architecture + Hilt, reducing production defects by 45% and increasing automated test coverage from 12% to 74%.
- ▶ Built Jetpack Compose-based modular UI systems and optimized app startup performance through lazy initialization, baseline profiles, and dependency deferral, improving Day-1 retention by 18%.
- ▶ Engineered offline-first synchronization architecture using Room + WorkManager, eliminating data-loss incidents during network instability and improving field-user reliability across production deployments.
- ▶ Designed secure mobile infrastructure with REST interceptors, token refresh automation, SSL pinning, encrypted local storage, and Firebase observability integrations, achieving zero critical security incidents.
- ▶ Automated Play Store release workflows with Fastlane CI/CD and collaborated across product, backend, QA, and design teams to maintain consistent sprint delivery velocity and production stability.

KEY PROJECTS

NexaPay — Scalable Fintech Mobile Platform — *Flutter · Dart · Firebase · Stripe · Razorpay · GraphQL · Clean Architecture · BLoC*

- ▶ Architected a production fintech application supporting multi-currency wallets, real-time transaction streaming, QR-based payments, and biometric-secured fund transfers for 120K monthly active users.
- ▶ Implemented PCI DSS-aligned payment flows with end-to-end encryption, fraud signal enrichment, and retry-safe idempotency keys — achieving 99.97% payment success rate.
- ▶ Built real-time portfolio analytics dashboard with WebSocket-driven data feeds, custom FI_Chart visualizations, and offline state hydration via Hive — with P99 render latency under 50ms.
- ▶ Delivered automated KYC onboarding flow with document OCR (ML Kit), liveness detection, and backend verification webhook — reducing onboarding drop-off by 34%.

VitaFlow — AI-Powered Health Automation Platform — *Flutter · Firebase · TensorFlow Lite · Anthropic Claude API · BLoC · FCM*

- ▶ Built a cross-platform health automation app integrating on-device TensorFlow Lite models for sleep pattern analysis, activity classification, and personalized wellness recommendations.
- ▶ Implemented Claude API-driven health insight generation engine producing natural language summaries from biometric data streams — increasing daily active engagement by 41%.
- ▶ Engineered real-time health data sync across iOS HealthKit and Android Health Connect with background task orchestration via WorkManager and background fetch — achieving <2% data-sync failure rate.
- ▶ Shipped multi-platform push notification system with personalized nudge algorithms, achieving 38% improvement in 30-day retention compared to baseline.

TrackFlow — Logistics & Fleet Management Application — *Kotlin · Jetpack Compose · MVVM · Google Maps SDK · WebSocket · Room · WorkManager*

- ▶ Built a live logistics tracking app for a 3PL client with real-time driver location streaming (WebSocket), route optimization overlays, ETA prediction, and geo-fence alerting for 8,000+ daily active shipments.
- ▶ Implemented offline-resilient job manifest system using Room + WorkManager — ensuring zero order data loss during field connectivity gaps and automatic sync-on-reconnect.
- ▶ Achieved 99.4% crash-free session rate post-launch through systematic memory profiling, coroutine lifecycle alignment, and Compose recomposition optimization.
- ▶ Delivered rich Jetpack Compose UI with real-time animated map markers, shimmer loading states, and deep-linked push notifications for status events — rated 4.8/5 by enterprise operations teams.

ShopSync — React Native Commerce Ecosystem — *React Native · TypeScript · GraphQL (Apollo) · Redux Toolkit · Offline-First · Stripe*

- ▶ Engineered a multi-vendor React Native commerce platform with offline-first cart, product catalog, and order management backed by Apollo Client cache persistence and optimistic UI patterns.
- ▶ Built GraphQL subscription-based inventory sync with conflict resolution — ensuring real-time stock accuracy across 50+ vendor catalogs with <500ms propagation latency.

- ▶ Integrated Stripe Payment Element with 3DS2 SCA compliance, Apple Pay, and Google Pay — achieving 18% checkout conversion improvement over previous implementation.
- ▶ Shipped modular native module bridges for barcode scanning (ZXing/AVFoundation) and AR product preview (ARCore/ARKit) — extending platform capabilities without full native rewrites.

FocusOS — SwiftUI Productivity Application — *Swift · SwiftUI · CoreData · WidgetKit · CloudKit · Combine · SiriKit*

- ▶ Developed a consumer productivity app for iOS with intelligent task scheduling, focus session analytics, habit tracking, and Siri Shortcuts integration — achieving 4.8/5 App Store rating at 15K reviews.
- ▶ Implemented CloudKit-backed iCloud sync with conflict resolution, offline queue, and live activity widgets via WidgetKit — seamlessly bridging iPhone, iPad, and Apple Watch surfaces.
- ▶ Built AI-assisted task prioritization engine using on-device CoreML model trained on personal work pattern data — surfacing daily agenda recommendations with 78% user acceptance rate.
- ▶ Delivered SwiftUI design system with custom animations (Matched Geometry Effect), haptic feedback choreography, and Dynamic Type accessibility — achieving 100% WCAG 2.1 compliance.

EDUCATION

Master of Computer Applications -

GNA University · 2018 – 2020

- Specialized in advanced mobile architecture, distributed application systems, and modern software design patterns, with practical exposure to enterprise-grade Android and cross-platform development.
- Led research-driven implementations in performance optimization, secure mobile computing, and scalable app delivery pipelines, strengthening expertise in production-focused engineering practices.

Bachelor of Computer Applications -

GNA University · 2015 – 2018

- Built a strong foundation in software engineering, object-oriented programming, database systems, and mobile application development, with hands-on implementation across Java and Android ecosystems.
- Developed multiple academic and real-world mobile projects while actively participating in technical workshops and collaborative coding initiatives focused on scalable application engineering.

CERTIFICATIONS & ACHIEVEMENTS

- ▶ Google Associate Android Developer — Certified, 2022
- ▶ AWS Certified Cloud Practitioner — Amazon Web Services, 2023
- ▶ Flutter & Dart: The Complete Guide — Udemy Advanced Certification, 2023
- ▶ Google Cloud Champion — Multiple national-level hackathon wins
- ▶ Open Source Contributor — Flutter community packages with 400+ GitHub stars
